Notice of Lodging of Proposed Consent Decree Under the Clean Water Act

On August 2, 2021, the Department of Justice lodged a proposed consent decree with the United States District Court for the Western District of Pennsylvania in the lawsuit entitled *United States and Pennsylvania Department of Environmental Protection v. Libertas Copper, LLC, d/b/a Hussey Copper*, Civil Action No. 2:21-cv-01016-WSS.

This is a civil action brought by the United States, on behalf of the U.S. Environmental Protection Agency, and the Commonwealth of Pennsylvania, Department of Environmental Protection (“PADEP”), against Defendant Libertas Copper, LLC, d/b/a Hussey Copper, alleging violations of the Clean Water Act, the Pennsylvania Clean Streams Law, and Defendant’s National Pollutant Discharge Elimination System permit. The complaint alleges that, between 2011 and the present, Libertas Copper discharged wastewater and storm water that caused oil sheens and contained pollutants—including copper, chromium, nickel, oil and grease, lead, pH, total suspended solids, and zinc—from its Leetsdale, Pennsylvania, copper-smelting facility to the Ohio River in violation of federal and state law.

Under the proposed Consent Decree, Libertas Copper would be required to implement significant measures designed to prevent future violations. These include the development and implementation of operational documents and a maintenance program designed to ensure effective collection, pretreatment, and treatment of wastewater; a third-party environmental audit; ongoing internal environmental inspections; violation response requirements; training; and auditing and implementation of an environmental management system. In addition, Defendant will pay a civil penalty of \$861,500, to be split evenly between the United States and PADEP.

Attachment—Exemption

NUCLEAR REGULATORY COMMISSION

Docket Nos. 50–424 and 50–425

Southern Nuclear Operating Company, Inc. Vogtle Electric Generating Plant, Units 1 and 2 Exemptions

I. Background

Southern Nuclear Operating Company, Inc. (SNC, the licensee) is the holder of Renewed Facility Operating License Nos. NPF–68 and NPF–81, which authorize operation of Vogtle Electric Generating Plant (Vogtle), Units 1 and 2, respectively. The licenses provide, among other things, that the facility is subject to all applicable rules, regulations, and orders of the U.S. Nuclear Regulatory Commission (NRC, the Commission) now or hereafter in effect. The facility consists of two pressurized-water reactors (PWRs) located in Burke County, Georgia.

In 1996, the NRC identified Generic Safety Issue (GSI)-191 associated with the effects of debris accumulation on PWR sump performance during design-basis accidents (Agencywide Documents Access and Management System (ADAMS) Accession No. ML030160807). As part of the actions to resolve GSI-191, the NRC issued Generic Letter (GL) 2004–02, “Potential Impact of Debris Blockage on Emergency Recirculation during Design Basis Accidents at Pressurized-Water Reactors,” dated September 13, 2004 (ADAMS Accession No. ML042360586), to holders of operating licenses for PWRs. In GL 2004–02, the NRC staff requested that these licensees perform an evaluation of the emergency core cooling system (ECCS) and the containment spray system (CSS) recirculation functions considering the potential for debris-laden coolant to be circulated by the ECCS and the CSS after a loss-of-coolant accident (LOCA) or high-energy line break inside containment and, if appropriate, take additional actions to ensure system function. The GL required that these licensees provide a written response to the NRC, pursuant to title 10 of the *Code of Federal Regulations* (10 CFR) section 50.54(f), describing the results of their evaluation and any modifications made, or planned, to ensure that the ECCS and the CSS remain functional.
